1) Match two diagrams with each one of the fractions below.

$$\frac{1}{2} = A = C$$

$$\frac{1}{4} = \dots = \dots$$

$$\frac{1}{8} = \dots = \dots$$

$$\frac{5}{16} = \dots = \dots$$

$$\frac{3}{8} = \dots = \dots$$

2) When Graham compares two fractions, he looks at the numerators. He says that the fraction with the biggest number in the numerator is the biggest fraction.

Give one example when Graham is right and one when he is wrong.
